

Commendation for Solidus Engineer from Gestalt

November 19, 2007

I want Solidus to know that your engineer is my hero and mentor. He is super and my MVP during the recently completed Federation Test 08. He took the lead in the Blade Server, Inbound J9 and J12 to AWSIM plus closing out CR and DR. He was also instrumental in our interactions with the Korea models and well as the IOS AWSIM TESTER. In another word quite busy. Without this engineer I would have been in real trouble. I would like to thank you for allowing your engineer to come and I look forward to working with him in the near future. He is a treasure of information and working knowledge which is very important in the use of the AFMSTT.

John Scimeca
CTR USAF AFAMS
